Pursuant to a congressional request, GAO identified the Federal Aviation Administration's (FAA) data and voice communications resources, focusing on FAA: (1) communications systems, including their functions and costs; and (2) organizations that manage communications operations and acquisitions. GAO found that: (1) FAA communications services provided data and voice communications among facilities and between facilities and aircraft in support of the National Airspace System; (2) FAA spent over \$218 million of its operations appropriation to lease resources for its 63 communications services and estimated that it would need about \$2.7 billion to develop and purchase communications between 1982 and 1999; (3) although FAA leased most of its communications resources, it had 20 projects in varying stages of development and implementation for which it planned to replace and upgrade existing equipment; (4) although FAA established a centralized communications management organization, it had separate organizations responsible for procurements, operations and maintenance, and system engineering; (5) FAA did not determine how the other organizations would work with the central organization, resulting in potential problems with equipment compatibility, effective system integration, and...

Reviews

This pdf can be well worth a read, and much better than other. I am quite late in start reading this one, but better then never. Your daily life span will probably be transform when you full looking over this book.
